

Exhibit VIII.C.17.b – Peak Demand Plans

Submit as Exhibit VIII.C.17.b. a description of plans to address water and electricity use restrictions during peak demand periods.

The Building Management System will provide demand limiting, duty cycling and load shedding of mechanical and electrical equipment during peak energy usage times to limit the use of electricity during peak demand periods. Through the use of the mandated Energy Consumption Monitoring, high energy users can be identified and tracked, which will then allow for operational strategies to be implemented to control energy and reduce operating costs. Water is more difficult to limit but with the water conservation measures employed including reclamation of storm water, water usage will be minimized as much as possible.
