

Service Dock and Loading facilities for the Gaming Facility are located at the northeast corner of the building with direct access from the adjacent service road. There are four dock areas, which are tractor-trailer delivery points with leveling gates on the dock. The other 2 loading bays are provided for trash, compacting and recycling, including paper, cardboard, glass and metals. Adjacent to the dock will be the grease recovery system which will have direct, piped connection from all food preparation locations with easy access for removal and cleaning of the grease. A dock master's office will be the control point for entry and exit of all goods and materials and, immediately adjacent to the dock, on the inside, there will be dry storage, refrigerated storage and dirty/clean linen areas.
