

EXHIBITS X.C.6 RENEWABLE ENERGY MOHEGAN SUN AT THE CONCORD

The project electric utility will be procured from renewal sources provided by the local utility company. The sources will be wind and hydro-electric power generating plants located in the state and delivered through the central power transmission system. These sources are qualified by NYSERDA and will support a minimum of 10% of the facility's annual electricity consumption based on rate structure. Furthermore, localized solar photovoltaics will be installed to support or augment lighting power for parking areas and common area egress lighting.
