

Submit as Exhibit VIII.C.15. a description of the planned dock and loading facilities, as well as armored car bay, including by square footage and schematic diagram. Describe their adequacy to serve the planned program (e.g. by comparison to analogous facilities).

Alternative #2 provides the same level of service for planned loading dock facilities as well as armored car bay. The main loading area is at the north end of the casino podium on a lower level, and serves the entire Montreign facility. A floor plan is illustrated in Exhibit VIII. C.5.a-ALT-2, as Attachment VIII.C.5.a.-1-ALT-2: page 4 (Right side of lower floor plan).

Alternative #2 services the armored car bay from the lower level, adjacent to the count room. This space is linked directly to the cage on the gaming floor by an internal elevator. On the gaming floor, the Cage Cashier area has four (4) windows to provide service for the reduced gaming positions in Alternative #2.
